Software is a conversation between the people who *build* it and the people who *use* it. I make sure both sides are heard.

9+ years shipping full stack products. *React, Next.js & TypeScript* at the core · AI native workflow · design system & enterprise scale experience.

01 Experience

SELECTED ROLES

Tenpu

NOV 2025 – NOW
AMSTERDAM · HYBRID

Senior Software Engineer

Enterprise grade procurement platform running RFI & RFP workflows for public buyers.

- Owning features end to end and shaping technical direction across a **Next.js + tRPC + Prisma + PostgreSQL** stack on Azure. tRPC and Zod give type safety from database to UI throughout.
- Built the **first queue service** on the platform with **NATS**, spinning out two specialised Node.js workers to offload email bursts (up to 1,000 at a time) and heavy export jobs that were saturating CPU on the monolith pods.

NATS

Deliverect

NOV 2021 – SEP 2025
AMERSFOORT · HYBRID

Senior Software Engineer

Real time restaurant operations platform serving millions of orders and global enterprise customers.

- Helped build **Pulse by Deliverect**, a Next.js/React analytics dashboard on top of Python/FastAPI, PostgreSQL, MongoDB and BigQuery, unifying performance data across locations and ordering channels into a single actionable view for enterprise customers.
- Started the **first iteration of Deliverect's design system** on Radix UI primitives, vanilla-extract and Storybook. The shared visual language every product team now builds on, directly accelerating feature velocity and tightening UI consistency across the suite.

2024 – NOW
(PARALLEL)
OWN CONSULTANCY

Part time Owner & Consultant

Partnered with a university research group on a P&ID digitalisation tool for chemical engineering.

- Designed and shipped an interactive diagram editor in **Vue 3 + KonvaJS** that lets engineers digitise P&ID schematics, review the digitised documents and render native DEXPI diagrams in the browser.
- Owning the full product loop: build, ship, gather feedback, iterate.

Earlier

2016 – 2021
ITALY

Frontend Developer · Kirey Group (Unicredit) · Mobilesoft

Led the **Angular 7 → 8** migration on a consumer finance product at Kirey; refactored core flows with RxJS to cut recurring bug classes. Earlier, grew an Angular 2 to 7 app into **Igea Banca's** primary digital banking platform at production scale.

02 Building in AI

SIDE PRODUCT · SOLO

DraughtsAI

ACTIVE

draughtsai.com

Two LLMs face off in real time draughts matches. **WebSocket streaming** for live spectating, **ELO ranked leaderboards**, and an arena that runs any LLM via OpenRouter. Shipped end to end solo. A concrete answer to "can you build an AI native product and ship it by yourself."

STACK & WORKFLOW

FRONTEND & UI

React · Next.js · TypeScript · Vue 3 · Angular · Tailwind CSS · Radix UI · vanilla-extract · Storybook · Remirror · RxJS · Redux · Framer Motion

BACKEND & DATA

Node.js · Python · FastAPI · tRPC · Zod · Prisma · PostgreSQL · MongoDB · BigQuery · Celery · WebSockets

INFRA & TESTING

Docker · Kubernetes · ArgoCD · Azure · Bun · Git · Vitest · Jest · Testing Library

AI NATIVE WORKFLOW

Daily use of **Claude Code**, **Cursor** and **Codex** as multipliers, not shortcuts. Comfortable wiring LLMs into products.
